

Citymesh – Full Stack Developer

Here's what you'll dive into:

A European leader in B2B connectivity. From 0G to 5G, we're not just in the game, we're reinventing it. With our roots deep in B2B, Citymesh offers top-tier 4G/5G networks and innovative WiFi-as-a-service solutions.

Are you ready to elevate your career with a telecom pioneer that's reshaping the industry? Are you a developer who cares more about 'how' a solution works rather than just 'what language it's written in'? This is your chance! Citymesh is on the lookout for a Full Stack Developer to help strengthen our approach!

At Citymesh, we build the software that supports, or runs on top of, the most advanced private wireless networks. Our applications power push-to-talk communications, edge deployments, and mission-critical portals for customers who cannot afford downtime. If you want your code to matter, this is where it does. We believe the future of development belongs to those who can conceive smart, efficient solutions and understand the logic behind a great architecture.

In this role, you'll be part of a focused, collaborative team where your input directly impacts our solutions. You will have the direct support and coaching of our experienced developers to help you grow, while still taking ownership of the features you build. You will be encouraged to think critically about the logic behind our builds. You'll be working primarily with a modern FastAPI (Python) and Vue.js stack, supported by a team that values knowledge sharing and robust DevOps practices.

Your job in a nutshell:

- Collaborative design: work with experienced developers and product owners to brainstorm and design the logic of new features before diving into the code.
- Feature ownership: take responsibility for the end-to-end development of components, from back-end logic to front-end delivery, with the safety net of peer reviews from your team.
- Logical problem solving: troubleshoot technical hurdles by identifying root causes. We value a developer who proposes a "better way" rather than just the "fastest way."
- System evolution: maintain and optimize existing Python and PHP (Symfony/Laravel) codebases, helping the team transition legacy logic into our modern microservices.
- Continuous growth: active participation in technical discussions and project planning to help refine our technical requirements and milestones.

These are your talents:

- With a 'solution first' mindset you demonstrate the ability to think through a project's requirements and find an efficient, logical path to a high-quality result.
- You have at 2 to 5 years of relevant experience in web development, a solid grasp of software lifecycles and are ready for more responsibility.
- Thanks to your practical knowledge of Python (FastAPI preferred) and JavaScript frameworks (Vue.js preferred, Modern Stack is your cup of tea.
- Your core web skills are on point thanks to your strong understanding of HTML/CSS frameworks such as Tailwind and database management (PostgreSQL/MySQL).

- You're familiar with Git and working within a Linux/Unix command-line environment.
- You communicate fluently in English and/or Dutch.
- Knowledge of Cloud Native & CI/CD (Kubernetes) and PHP familiarity (Symfony or Laravel) are strong added values.

What we offer

At Citymesh you will be part of an enthusiastic and ambitious team in which we greatly value your own input and believe in the growth of each of our employees.

We offer you a great opportunity to work for a fast-growing and innovative employer that operates as a challenger in the Belgian telecom market. Next to this, we also offer a wide range of benefits, including:

- A full-time permanent contract.
- An attractive salary package with fringe benefits such as meal vouchers (€8/day), eco vouchers, health insurance, CAO90 bonus, year-end bonus, net expense allowance, and an annual sector bonus in line with PC 200
- A cafeteria plan allowing you to optimize your salary with options such as multimedia, pension savings, etc
- A mobile phone subscription and the opportunity to purchase home internet at a highly discounted rate.
- Enjoy the benefits of a company car including fuel card or choose for a mobility budget.
- A modern, welcoming work environment where colleagues take center stage, making sure you feel truly at home.

- Flexibility and hybrid working aren't just promises: we ensure a healthy work-life balance through flexible hours and plenty of work-from-home opportunities.
- You work 40 hours per week, meaning that on top of your statutory holidays (20 days), you also receive 12 additional days off per year (for full-time employment).
- We have a genuine foodie culture: fresh fruit every Monday, homemade soup three times a week, and on Fridays, colleagues regularly enjoy grabbing fries together. Sushi lovers also frequently meet up for lunch.
- Our office in Oostkamp is easily accessible, located close to the highway exit.
